1 PATIENT DATA COLLECTION SYSTEM

2

3 ABSTRACT

4

5 A system includes force measuring apparatus 6 measuring weight and balance forces, an abutment spaced 7 from and opposing the force measuring apparatus, apparatus 8 for delivering screening stimulus proximate the abutment 9 for calculating height measurements between 10 abutment and the force measuring apparatus, input apparatus for accepting patient responses to the screening stimulus, 11 12 and a processing unit associated with the force measuring 13 apparatus, the apparatus and the input apparatus for 14 collecting and storing a) patient's age, sex and details surrounding patient medical history, b) measured weight and 15 balance forces, c)patient responses 16 from the 17 apparatus and d)calculated height measurements between the 18 abutment and the force measuring apparatus.
